

# NESU CARD

N°1 CELL PHONE PROTECTION

The human body is exposed on a daily basis to electrical smog and electromagnetic radiation through the use of mobile devices.

**NESU** works to eliminate the electromagnetic loads of mobile devices. In addition to the loads that are due to active use of the mobile device, **NESU** will also eliminate those that originate from other devices.

**NESU** has a soothing effect on the meridians of degeneration of the nerves and of the colon and restores meridian of the blood flow.

During testing, it was noticed that the use of mobile devices leads to a negative effect (“negative” energy) on certain parts of the human body, whereas the energy becomes “positive” when **NESU** is inserted into the mobile device.

**NESU** prevents the absorption of negative radiation from mobile devices into the human body. **NESU** helps against electro-smog and is recommended for all persons who use mobile devices or who are in any way exposed to electromagnetic radiation.

More about the product can be found at [www.nesu.eu](http://www.nesu.eu)

**NESU** is made from raw materials that have not previously been chemically treated (copper 0.2 mm, titanium 1 g/m<sup>2</sup>, quartz 1 g/m<sup>2</sup>). The ingredients are non-toxic and are well tolerated by the human body which usage have even been tested in medical technology. **NESU** is created using a vacuum process, and is then put under an energy program under an exact frequency. **NESU** is designed for use in any existing mobile device. With dimensions of 25 mm x 10 mm, and a thickness of 0.2 mm, **NESU** is placed inside the casing of any mobile device, or fastened onto the back of the mobile device if the battery cover is not removable.

## Summary of results from the study conducted at the Institute IBBU

Research was conducted in IBBU Institute Austria in cooperation with the Centre for Intellectual Medical Systems “IMEDIS”, Moscow, Russia.

The aim of the study was to examine whether the state of homeostasis is reduced or enhanced when using **NESU** in a mobile device. In addition, it was necessary to examine to what extent **NESU** reduces or eliminates the electromagnetic loads. In the study, special attention was paid to the state of the vegetative nervous system, as well as to the changes in energy flow in the meridian system.

### ***IMEDIS-Test (Vegetative resonance test)***

Vegetative Resonance Test is a diagnostic method, registering changes in value of electroconductivity of measuring point when test-preparation is introduced into circuit of measurement, which marks presence or absence of certain disturbances in different organs and systems.

Using the “IMEDIS test”, responses of persons were measured on resonance vibration materials (a variety of endogenous or exogenous load, nosodes, organic products, etc.).
